### DETAILED ACTION

1. It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

1. Application number (checked for accuracy, including series code and serial no.).
2. Group art unit number (copied from most recent Office communication).
3. Filing date.
4. Name of the examiner who prepared the most recent Office action.
5. Title of invention.
6. Confirmation number (See MPEP § 503).

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Hayashi et al (6,069,884).

Consider claims 1-7 as claimed. Hayashi discloses a base station comprising: a plurality of transmitting antennas for transmitting a plurality of reference signals and data signal version (0220,0221);) the transmitted reference signals are not delayed with respect to each other and the data signal version are not transmission channel compensation processed; a plurality of reference signal generator, each reference signal generator generating a code uniquely

associated with its operatively coupled to antenna (0211,0212); a data signal generator for producing a data signal (0201,0202,); and a plurality of mixer for producing the plurality of the data signal version, each version having a different code for the respective transmitting antenna(0204,0205). The base station further comprising at least one additional data signal generator and mixer for producing at least one additional data signal (0203,0206) as claimed in claim 6. The base station transmission is in time division duplex format as claimed in claim 4 and 7. (See fig.2 and col.11, lines 21-65 and abstract.

#### ***Allowable Subject Matter***

4. Claims 17-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Huang (6,870,825) is cited to show diversity transmission using pilot signal.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Temesghen Ghebretinsae whose telephone number is

571-272-3017. The examiner can normally be reached on Monday-Friday from 8 to 6.  
The examiner can also be reached on alternate.
